

Experiment: Inventory Management System using Dynamic Structures

Aim: Develop a menu-driven Inventory Management System using dynamic memory allocation (malloc(), realloc(), and free()) to add, display, search, update, and delete product records.

Algorithm

1. Start the program.
2. Display the menu.
3. Allocate memory dynamically using realloc() whenever a new product is added.
4. Store Product ID, Name, Quantity, and Price.
5. Allow the user to:
 - Add a product
 - Display all products
 - Search a product
 - Update product details
 - Delete a product
 - Exit
6. Free the allocated memory before terminating.

Expected Input and Output:

===== INVENTORY MANAGEMENT =====

1. Add Product
2. Display Products
3. Search Product
4. Update Product
5. Delete Product
6. Exit

Enter your choice: 1

Enter Product ID: 101

Enter Product Name: Keyboard

Enter Quantity: 25

Enter Price: 850

Product Added Successfully.

ID	Name	Quantity	Price
101	Keyboard	25	850.00
102	Mouse	40	450.00
103	Monitor	15	9500.00
